B.Sc. Mathematics

Syllabus

AFFILIATED COLLEGES

Program Code: 22A

2023 - 2024 onwards

BHARATHIAR UNIVERSITY

(A State University, Accredited with "A++" Grade by NAAC, Ranked 21st among Indian Universities by MHRD-NIRF)

Coimbatore - 641 046, Tamil Nadu, India

Program	Educational Objectives (PEOs)						
The B. Sc. Mathematics program describe accomplishments that graduates are expected to attain within five to seven years after graduation							
PEO1	Acquire knowledge in functional areas of Mathematics and apply in all the fields of learning.						
PEO2	Recognise the need for life long learning and demonstrate the ability to explore some mathematical content independently.						
PEO3	Employ mathematical ideas encompassing logical reasoning ,analytical, numerical ability , theoretical skills to model real-world problems and solve them.						
PEO4	Develop critical thinking ,creative thinking, self confidence for eventual success in career.						
PEO5	Analyze, interpret solutions and to enhance their Entrepreneurial skills, Managerial skill and leadership						
PEO6	To prepare the students to communicate mathematical ideas effectively and develop their ability to collaborate both intellectually and creatively in diverse contexts.						
PEO7	Rewarding careers in Education, Industry, Banks, MNCs and pursue higher studies						

Program	Program Specific Outcomes (PSOs)							
After the	successful completion of B. Sc. Mathematics program, the students are expected							
to								
	Maintain a core of mathematical and technical knowledge that is adaptable to							
PSO1	changing technologies and provides a solid foundation for extended learning.							
PSO2	Identify the applications of Mathematics in other disciplines and society.							
	Develop an in-depth knowledge in Mathematics appreciating the connections							
PSO3	between theory and its applications.							
DCO4	Demonstrate their mathematical modeling ability, problem solving skills, creative							
PSO4	talent and power of communication necessary for various kinds of employment.							
PSO5	Develop mathematical aptitude and the ability to think abstractly.							
PSO6	Learn independently and improve ones performance.							
PSO7	Students are equipped to appear competitive examinations.							

Program	Program Outcomes (POs)						
On succe	ssful completion of the B. Sc. Mathematics program						
PO1	Students are empowered with analytical and logical skills-to formulate results						
POI	and construct mathematical argument.						
PO2	Ability to organize, analyze and interpret data accurately in both academic and						
FO2	non -academic context.						
	Demonstrate effective communication of mathematical ideas and creative						
PO3	thinking skills to facilitate solving real world problems as a team and						
	independently.						
PO4	Appreciate and identify the connections between Mathematics and other						
104	disciplines.						
PO5	Competency to obtain employment in education, public and private sectors						
PO6	Identify the area of interest for extended learning from the understanding gained						
100	from the domain and allied areas of Mathematics.						
PO7	Develop mathematical aptitude and make critical observations.						
PO8	Garner innovative ideas to face global challenges.						
PO9	Instill a sense of responsibility in tackling professional and social issues						
	ethically.						
PO10	Trigger their passion for research in unexplored areas of Mathematics.						

BHARATHIAR UNIVERSITY: COIMBATORE 641 046

B. Sc. Mathematics Curriculum (Affiliated Colleges) (CBCS PATTERN)

(For the students admitted from the academic year 2023-2024 and onwards)

Core/Elective/Supporti	ve Core Paper – V	3	-	-	4
Due neguisite	Knowledge of Ordinary and Partial	Syllabu	IS	202	3-
Pre-requisite	Derivatives	Version	1	2024	
Course Objectives:					

To impart knowledge on the method of solving ordinary differential Equations of First Order and Second Order, Partial Differential equations, Laplace Transforms, its inverse and application of Laplace Transform to solve the first and second Order Differential Equations with constant coefficients.

Expected Course Outcomes: On the successful completion of the course, student will be able to: Acquire knowledge to solve Differential and Partial Differential Equations. K1 2 Solve higher order linear differential equations. K2 K3 Expose differential equation as a powerful tool in solving problems in Physical and Social sciences. **K**3 4 Demonstrate competency to solve linear PDE by Lagrange's method 5 Analyze the concepts of Laplace transform and inverse Laplace K4 transforms to solve ODE with constant coefficients. K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Differential Equation of First Order and Higher Degree. 9 hours

Ordinary Differential Equations: Equations of First Order and of Degree Higher than one – Solvable for p, x, y– Clairaut's Equation – Simultaneous Differential Equations with constant coefficients of the form

- i) $f_1(D)x + g_1(D)y = \varphi_1(t)$
- ii) $f_2(D)x + g_2(D)y = \varphi_2(t)$ where f_1 , g_1 , f_2 and g_2 are rational functions of D=d/dt with constant coefficients and φ_1 , φ_2 are explicit functions of t.

Unit:2	Higher Order Linear Differential Equation	9 nours
Finding the sol	ution of Second and Higher Order with constant coefficients with	Right Hand Side
is of the form	Ve ^{ax} where V is a function of x – Euler's Homogeneous Lin	near Differential
Equations.		

Unit:3	Partial Differential Equations	9 hours							
Partial Differe	ntial Equations: Formation of equations by eliminating arbit	trary constants and							
arbitrary functions - Solutions of P.D Equations - Solutions of Partial Differential Equations by									
direct integrati	direct integration – Methods to solve the first order P.D. Equations in the standard forms –								
Lagrange's Lin	Lagrange's Linear Equations.								
Unit:4	Laplace Transforms	9 hours							

Unit:4Laplace Transforms9 hoursLaplace Transforms: Definition – Laplace Transforms of standard functions – Linearity property –First Shifting Theorem – Transform of tf(t), , f (t)/t, f (t), f '(t).

Uı	nit:5	Inverse Laplace Transforms	9 hours
		ce Transforms - Applications to solutions of First Order	and Second Order
Dif	<u>ferential Eq</u>	uations with constant coefficients.	
		Total Lecture hours	45 hours

PRACTICAL LIST

- 1. Write a C program to generate 'N' Fibonacci number.
- 2. Write a C program to print all possible roots for a given quadratic equation.
- 3. Write a C program to calculate the statistical values of mean, median.
- 4. Write a C program to calculate the statistical values of Standard Deviation and variance of the given data.
- 5. Write a C program to sort a set of numbers.
- 6. Write a C program to sort the given set of names.
- 7. Write a C program to find factorial value of a given number 'N' using recursive function call.
- 8. Write a C program to find the product of two given matrix

Course code	REAL ANALYSIS - I	L	T	P	C			
Core/Elective/Suppor	re/Elective/Supportive Core Paper – IX		-	-	4			
Pre-requisite	Knowledge in the basic properties of real numbers	Syllabus Version		2023 - 2024				
Course Objectives:								
Aimed at aynosing th	e real number systems that undernin the development	of root analys	nia a	nd:	in			

Aimed at exposing the real number systems that underpin the development of real analysis and in understanding various physical phenomena.

Expected Course Outcomes: On the successful completion of the course, student will be able to: Remember the basic topological properties of subsets of the real numbers. K1 2 Understand the fundamental properties of the real numbers and analyze the real K2 number system. Learn the concept of limits, sequence, continuity, convergent sequence in metric K2 spaces appreciating the abstract ideas and their applicability. Have the proficiency in the formulation and construction of proofs of basic results in **K**3 real analysis. 5 Demonstrate skills in communicating Mathematics and learn basic techniques and K4 examples in analysis to be well prepared for extended learning.

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Introduction -the field axioms, the order axioms –integers –the unique Factorization theorem for integers –Rational numbers –Irrational numbers –Upper bounds, maximum Elements, least upper bound –the completeness axiom –some properties of the supremum –properties of the integers deduced from the completeness axiom. The Archimedean property of the real number system –Rational numbers with finite decimal representation of real numbers –absolute values and the triangle inequality –the Cauchy-Schwarz inequality –plus and minus infinity and the extended real number system.

Unit:2	Basic Notions of a Set Theory.	15 hours				
Notations –ordered pairs –Cartesian product of two sets – Relations and functions – further						
terminology concerning functions –one–one functions and inverse –composite functions –						
sequences –similar sets-finite and infinite sets –countable and uncountable sets –uncountability of						
the real number system –set algebra –countable collection of countable sets.						

Unit:3 **Elements of Point Set Topology** 15 hours Elements of point set topology: Euclidean space Rⁿ – open balls and open sets in Rⁿ. The structure of open sets in Rⁿ -closed sets and adherent points -The Bolzano -Weierstrass theorem -the Cantor Intersection Theorem Unit:4 **Covering and Compactness** 15 hours Covering –Lindelof covering theorem –the Heine- Borel covering theorem –Compactness in Rⁿ -Metric Spaces -point set topology in metric spaces -compact subsets of a metric space -Boundary of a set. Unit:5 **Limits and Continuity in Metric Spaces** 15 hours Convergent sequences in a metric space – Cauchy sequences – Completeness sequences – complete metric Spaces. Limit of a function -Continuous functions -continuity of composite functions. Continuous complex valued and vector valued functions. **Total Lecture hours** 75 hours **Text Book** Mathematical Analysis-T.M.Apostol (2nd ed., Narosa Publishing Company, Chennai, 1990.) **Unit I**: Chapter 1 Sections 1.2, 1.3, 1.6 to 1.16, 1.18 to 1.20 Unit II : Chapter 2 Sections 2.2 to 2.15 Unit III: Chapter 3 Sections 3.2 to 3.9 Unit IV: Chapter 3 Sections 3.10 to 3.16 Unit V: Chapter 4 Sections 4.2 to 4.5, 4.8 to 4.10 **Reference Books** Methods of Real Analysis -R.R.Goldberg.(NY, John Wiley, New York 1976.) Introduction to Topology and Modern Analysis- G.F. Simmons. (McGraw – Hill, New York, 1963.) A survey of Modern Algebra (3rd Edition)-G.Birkhoff and MacLane. (Macmillan, New 3 York, 1965.) Course code		COMPLEX ANALYSIS - I	L	T	P	C
Core/Elective/Su	ıpportive	Core Paper – X	6	-	-	4
Pre-requisite		Knowledge in Calculus	Syllabı Versioi		2023 - 2024	-
Carriage Objecti						

Course Objectives:

To equip the students with the understanding of the fundamental concepts of complex functions, analyticity ,power series and complex integration.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

1	Learn techniques of complex analysis effectively to establish mathematical results.	K1
2	Recognize the simple and multiple connected domains.	K2
3	Investigate a function for its analyticity and find it series development.	K3
4	Examine the relationship between conformal mapping and analytic functions	K4
5	Compute contour integrals directly and by the fundamental theorem.	K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Complex Plane 18 hours

Complex number system –Field of Complex numbers – Scalar multiplication of a complex number – Conjugation – Absolute value of a complex number-Inequalities in terms of moduli – Elementary Transformations i) $w=z+\alpha$ ii) w=az iii) w=1/z. Fixed points -cross-ratio-invariance of cross-ratio under bilinear transformation –Definition of extended complex plane – Stereographic projection.

Unit:2 Analytic Functions 18 hours

Complex Functions- Limit of a function —continuity —differentiability — Analytical function defined in a region —necessary conditions for differentiability —sufficient conditions for differentiability —Cauchy-Riemann equation in polar coordinates —Definition of entire function.

Unit:3 Power Series and Elementary Functions 18 hours

Absolute convergence –circle of convergence –Analyticity of the sum of power series in the Circle of convergence (term by term differentiation of a series). Elementary functions: Exponential, Logarithmic, Trigonometric and Hyperbolic functions.

Unit:4 Harmonic Functions and Conformal Mapping 18 hours

Conjugate Harmonic functions: Definition and determination. Conformal Mapping: Isogonal mapping –Conformal Mapping-Mapping $z \rightarrow f(z)$, where f is analytic, particularly the mappings. $w = e^z$: $w = z^2$; $w = \sin z$; $w = \cos z$; w = z + 1/z.

Unit:5 Complex Integration 18 hours Simply and multiply connected regions in the complex plane. Integration of f(z) from definition
Simply and multiply connected regions in the complex plane. Integration of f(z) from definition
along a symmetric in in a 7, and 7. Proof of Cayahy's Theorem (young Cayanat's lamane for a simply
along a curve joining z_1 and z_2 . Proof of Cauchy's Theorem (using Goursat's lemma for a simply
connected region). Statement of Cauchy's integral formula for higher derivatives - Morera's
theorem.
T-4-114 00 b
Total Lecture hours 90 hours

Total Lecture hours 75 hours

Text Book

Complex Analysis (For Undergraduate Students of Mathematics, Physics and Engineering) -P.Duraipandian and Kayalal Pachaiyappa (S Chand Publishing, S Chand And Company Limited, Reprint 2020)

Unit I : Chapter 8 Sections 8.10, 8.11

Unit II: Chapter 9 Sections 9.1 to 9.3, 9.13.

Unit III: Chapter 9 Sections 9.5 to 9.12, 9.13. Chapter 10 Sections 10.1, 10.2 and 10.4.

Unit IV: Chapter 10 Sections 10.3 and 10.4.

Unit V: Chapter 11 Sections 11.1 to 11.3 (Except theorems 11.5 and 11.6)

Core/Elective/Supportive ELECTIVE I - A Syllabus 2023	Course	e code		ASTRONOMY – I	L	T	P	C		
Course Objectives: To enable the students to understand the Astronomical aspects and about the laws governing the pla movements. Expected Course Outcomes: On the successful completion of the course, student will be able to: 1 Define properties of physical systems that comprise the known universe K 2 Understand the Solar system, Celestial sphere, Dip-Twilight & Kepler's laws. 3 Apply their physics and mathematical skills to problems in the areas of planetary science. 4 Demonstrate the skill to infer valid scientific conclusions and communicate those conclusions in a clear and articulate manner. 5 Analyze the astronomical concepts. K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create Unit:1 Solar system 15 hou General description of the Solar system. Comets and meteorites – Spherical trigonometry. Unit:2 Celestial sphere 15 hou Celestial sphere – Celestial co – ordinates – Diurnal motion – Variation in length of the day. Unit:3 Geocentric parallax 15 hou Dip – Twilight – Geocentric parallax.	Core/E	Elective/S	upportive	ELECTIVE I – A	5	-	_	3		
To enable the students to understand the Astronomical aspects and about the laws governing the pla movements. Expected Course Outcomes:	Pre-r	equisite		Knowledge in Physics and Mathematics

Course code		PROGRAMMING IN C++	L	T	P	C
Core/Elective/S	upportive	ELECTIVE III - C	4	-		3
Pre-requisite	:	K nawladga in (Syllabu Version		202 202	
Course Object	Hivroge					

To enable the students to learn about the class structure, operators, inheritance, polymorphism, file handling.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

1	Know about class structure, member functions & data members, inheritance types and example problems.	K1
2	Understand how C++ improves C with object-oriented features.	K2
3	Develop programming skills.	K2
4	To make use of objects and classes for developing programs.	K3
5	Build C++ classes.	K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Tokens, Expressions and Control Structures 12 hours

Evolution of C++ - applications of C++ - structure of C++ program. Tokens - keywords - identifiers and constants - basic data types - user-defined data types - constant pointers and pointers to constants - symbolic constants - type compatibility - declaration of variables - dynamic initialization of variables - reference variables - operators in C++ - scope resolution operator - memory management operators - manipulators - type cast operator - expressions and their types - special assignment expressions - implicit conversions - operator precedence.

Unit:2 Functions in C++ 12 hours

The main function – function prototyping – call by reference – return by reference – inline functions – default arguments – const arguments – function overloading. Managing Console, I/O Operations: C++ streams – C++ stream classes – unformatted console I/O operations – formatted console I/O operations –managing output with manipulators.

Unit:3 Classes and Objects 12 hours

Specifying a class – defining member functions – making an outside function inline – nesting of member functions – private member functions – arrays within a class – memory allocation for objects –arrays of objects – objects as function arguments – friend functions – returning objects – const member functions. Constructors and Destructors: Introduction – constructors – parameterized constructors – multiple constructors in a class – constructors with default arguments – copy constructor.

Introduction – defining operator overloading – overloading unary operators – overloading binary operators using friends – rules for overloading operators.	1 r V								
operators - overloading binary operators using friends – rules for overloading operators.									
operators - overloading binary operators using friends – rules for overloading operators.									
Unit:5 Inheritance 12 hou									
Introduction – defining derived classes – single inheritance – making a private member inherital									
- multilevel inheritance - multiple inheritance - hierarchical inheritance - hybrid inheritance.

Course code		PROGRAMMING IN C++ (PRACTICAL)	L	T	P	C
Core/Elective/Supportive		ELECTIVE III - C(Practical)	-	-	1	1
Pre-requisite		K nowledge in (++	Syllabus Version		2023 2024	

PRACTICAL LIST

- 1. Write a function 'power()' to raise a number 'm' to a power 'n'. The function takes a 'double' value for 'm' and 'int' value for 'n', and returns the result correctly. Use a default vale of 2 for 'n' to make the function to calculate squares when this argument is omitted. Write a main() that gets the values of 'm' and 'n' from the user to test the function.
- 2. Write a program to compute compound interest of a given amount AMT for 'n' years. Use function overloading so that the program gets input of interest rate RATE in any of the data type 'float' or 'int'
- 3. Create a class which consist of employee detail ENO, ENAME, DEPT, BASIC SALARY. Write a member function to get and display them. Derive a class PAY from the above class and write a member function to calculate DA, HRA and PF depending on the grade and display the pay slip in a neat format using console I/O
- 4. Define two classes POLAR and RECTANGLE to represent points in the polar and rectangle system. Write a program to convert from one system to another.
- 5. Create a class FLOAT that contains one float data member. Overload all the four arithmetic operators so that they operate on the objects of FLOAT.

Course code		INTRODUCTION TO INDUSTRY 4.0	L	Т	P	C
Core/Elective/S	Supportive	ELECTIVE III – E	5	-	-	4
Pre-requisite	.	Basic Knowledge of Computer and Internet	Syllabu Version		202 202	_
Course Objec	tives:					

Γο impart knowledge on Industry 4.0, need for digital transformation and the following Industry 4.0 tools:

- 1. Artificial Intelligence
- 2. Big Data and Data Analytics
- 3. Internet of Things

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	,	
1	Know the reason for adopting Industry 4.0 and Artificial Intelligence.	K1
2	Understand the need for digital transformation.	K2
3	Apply the industry 4.0 tools.	K3
4	Analyze the applications of Big Data	K4
5	Examine the applications and security of IoT Applications.	K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Industry 4.0 15 hours

Need – Reason for Adopting Industry 4.0 - Definition – Goals and Design Principles - Technologies of Industry 4.0 – Big Data – Artificial Intelligence (AI) – Industrial Internet of Things - Cyber Security – Cloud – Augmented Reality.

Unit:2 Artificial Intelligence 15 hours

Artificial Intelligence: Artificial Intelligence (AI) — What & Why? - History of AI - Foundations of AI - The AI -environment - Societal Influences of AI - Application Domains and Tools - Associated Technologies of AI - Future Prospects of AI - Challenges of AI.

Unit:3 Big Data and IoT 15 hours

Big Data: Evolution - Data Evolution - Data: Terminologies - Big Data Definitions - Essential of Big Data in Industry 4.0 - Big Data Merits and Advantages - Big Data Components: Big Data Characteristics - Big Data Processing Frameworks - Big Data Applications - Big Data Tools - Big Data Domain Stack: Big Data in Data Science - Big Data in IoT - Big Data in Machine Learning - Big Data in Databases - Big Data Use cases Big Data in Social Causes - Big Data for Industry - Big Data Roles and Skills - Big Data Roles - Learning Platforms; Internet of Things (IoT): Introduction to IoT - Architecture of IoT - Technologies for IoT - Developing IoT Applications - Applications of IoT - Security in IoT.

Unit:4 Applications and Tools of Industry 4.0 15 hours

Applications of IoT – Manufacturing – Healthcare – Education – Aerospace and Defense – Agriculture – Transportation and Logistics – Impact of Industry 4.0 on Society: Impact on Business, Government, People. Tools for Artificial Intelligence, Big Data and Data Analytics, Virtual Reality, Augmented Reality, IoT, Robotics.

Unit:5 Jobs 2030 15 hours

Industry 4.0- Education 4.0- Curriculum 4.0- Faculty 4.0- Skills required for Future - Tools for Education - Artificial Intelligence Jobs in 2030- Jobs 2030- Framework for aligning Education with Industry 4.0- .

Total Lecture hours 75 hours
